

INTERSET

What Makes Interaset Different Part 1

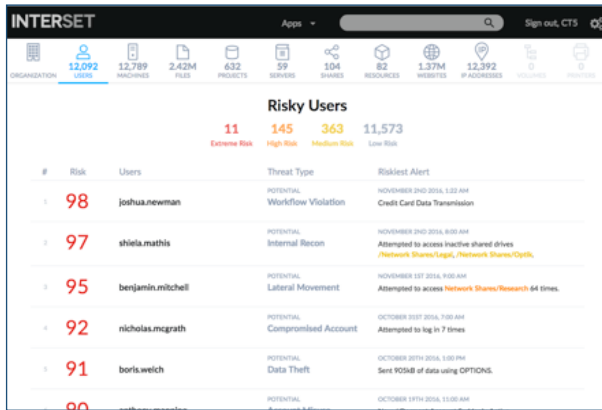

Our AI is Different: Unsupervised Machine Learning, Unique Normal, and a Useful Risk Score

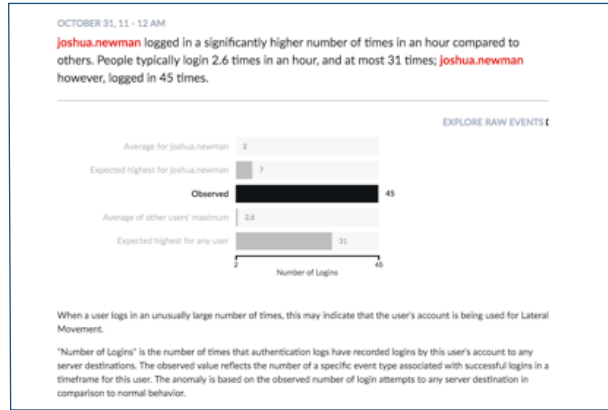

As one of many vendors in the cybersecurity space competing for budget based on buzzwords like AI, machine learning, threat hunting, accelerated threat detection, advanced analytics, big data, deep learning, neural networks, and more, we understand your skepticism when you see and hear those exact words from us.

This paper describes our unique AI approach and how it impacts SOC team efficiency

About Intersect

Intersect, now a part of Micro Focus, equips security teams with analytics to detect, investigate, and respond to threats before data is stolen. Our user and entity behavioral analytics augments existing security tools and leverages machine learning to measure the unique footprint of systems and users—distilling billions of events into a handful of prioritized threat leads. What used to take months, now takes minutes. A member of the In-Q-Tel portfolio, Intersect is trusted to protect critical data and infrastructure in the finance, high tech manufacturing, healthcare, utility, and energy industries. Visit us at Intersect.AI. Visit us at intersect.ai, and follow us on [Twitter](https://twitter.com/IntersectAI), [LinkedIn](https://www.linkedin.com/company/intersect-ai), and [Facebook](https://www.facebook.com/IntersectAI).
